

Bringing it all together

# Video Bridging 3.0 Interop

## The Global Video Exchange family of services

### In-the-cloud Video Bridging services provide interoperability and cross-network connectivity.

Today enterprises need access to managed, in-the-cloud Video Bridging services to deliver the ultimate in video interop along with audio, web and streaming communication services. BT is the front runner in “bringing it all together” by providing video conferencing services for traditional video, PC-based video and Telepresence systems – all with a focus on simplifying the technology according to your specific requirements. And once we’ve designed and implemented your solution, you rest assured knowing that it’s supported by our award-winning cross-vendor infrastructure, our easy-to-use BT Engage Meeting Manager interface and an experienced 24x7x365 global helpdesk team.

#### Business-to-business video conferencing

B2B video conferencing is becoming a necessity, but having a video conference with participants joining from partner private networks can be challenging without the right solution. BT, the pioneer of B2B video communication, leads the industry in making it easy to reach outside of your enterprise to connect with clients, partners and vendors that are critical to your business success. With the most versatile offering in the industry, BT leverages its dominance with in-the-cloud video conferencing services and a managed bridging infrastructure to make your partner connection. Combined with our know-how in managing networks, we’re able to deliver a seamless end-to-end managed solution. Customers can select from conference producer assistance or use BT’s Engage universal interface for Self-service conference applications.

#### Interoperability and Unified Communications

The Telepresence bridging capabilities of BT have been designed to interoperate across the major Telepresence manufacturer platforms in accordance with Telepresence Interoperability Protocol (TIP), traditional SD/HD systems, PC-based audio, web and video conferencing to deliver a true Unified Communications experience. Our Video Bridging solutions integrate different vendor platforms, BT services and a variety of networks into one seamless end-to-end managed video managed offering. Audio and web interaction alongside this turns BT in-the-cloud Video

Bridging into a powerful and compelling solution for your business. Although our bridging services are available on BT-owned in-the-cloud infrastructure, they can easily be extended to customer-owned infrastructure by building the required connectivity between the BT cloud and the customer’s premises.

## Reduce your investment by using BT Conferencing in-the-cloud

### Telepresence HD technology

BT Conferencing continuously invests in new Video Bridging platforms in order to provide a best-in-class video conferencing experience to our customers. Today, BT in-the-cloud video bridges are Telepresence-enabled, providing HD video, high quality audio, multi-resolution and continuous presence layouts. All of these are significant features driving increased end-user benefit by enabling the best video and audio quality for the available network capacity and endpoint capabilities.

### BT Engage Meeting Manager

BT Engage Meeting Manager is our proprietary web-based tool that gives you the flexibility and convenience to schedule, launch, monitor and control video conferences. Designed with the non-technical user in mind, BT Engage is an easy-to-use application that prevents resource conflicts and ensures each video conference has desired feature support and provides essential, real-time reporting on critical usage and endpoint functionality.

The BT Engage suite also includes vital add-on enhancements – BT Engage Meeting Tracker and BT Engage Meeting Mobile App. BT Engage Meeting Tracker, which has set the industry standard for capturing video ROI, tallies actual travel and carbon savings. This provides companies with the ability to measure the value of conferencing beyond the quality-driven “wow” factor, and focus on bottom-line advantages associated with accelerated video use.

And with BT Engage Meeting Mobile App, scheduling and managing your video conferences is simple even when you're on the go. You still have the BT Engage easy-to-use functionality, but now with the ability to manage your meetings when using iPhone and iPad devices or Android-based smart phones and tablets. This brings you the power of BT Conferencing communications when and where you need it, and the ability to always stay connected.

### End-to-end BT managed services

As one of the largest providers of both Video Bridging infrastructure as well as in-the-cloud bridging services, BT leads the industry. Whether it is call launching, end-user assistance, trouble shooting or maintenance support, BT knows the products and has created the best practices. Above all, BT excels in working to determine the most cost-effective way for customers to benefit from Video Bridging solutions.

### Simplifying conferencing technology with predictable pricing and self-service tools

BT allows you to capture the power of Telepresence, traditional as well as PC-based video conferencing, according to your meeting needs with the use of one simple-to-use automated tool. Video Bridging provides different end-user experiences – Self-service, Assisted and Custom Event\* – and puts you in charge of call scheduling and launching. This gives you the ability to easily migrate from one service solution to another if you require additional event support.

To provide added flexibility, we also provide a predictable flat rate pricing structure or a pay-as-you-go pricing model, giving a clear view on service related costs as well as straightforward ROI tracking methodologies and reporting capabilities.

### Self-service video conference

With Self-service, you're able to schedule your own video conferences quickly and reliably with easy-to-use tools. Our BT Engage interface is accessed with a few simple clicks of the mouse and enables you to verify room availability, quickly manage conferencing resources and schedule meetings.

### Assisted video conference

If you want a little extra help with your video conference, choose Assisted service. Expert conference producers connect each site in order to ensure network stability and digitally monitor all Assisted conferences in order to provide technical reliability.

\* Restrictions apply

## Custom event video conference

For meetings requiring dedicated resources and multimedia support, Custom Event service is the best-fit solution. This service supports virtually unlimited numbers of video and audio participants, multimedia content and audiovisual production capabilities. Dedicated conference producers are also available to interact with meeting attendees, push content, moderate Q&A sessions and choreograph site adds/drops. Pre-conference planning sessions give you the opportunity to coordinate event requirements with a dedicated conference producer, verify presentation requirements, review effective visual cues and resolve other logistical challenges.

## Providing cost-effective, superior value

Our competitive Video Bridging and network rates not only make video conferencing more affordable, but also provide you with a significant collaboration advantage. With over 20 years of experience, a global MPLS footprint in over 170 countries and the highest number of certified technicians in the industry, BT has a proven track record for delivering high performance in-the-cloud Video Bridging services.
